

GCSReadMail

You are a salesman, you are a team manager, you are often travelling and you wish to consult your company mailbox easily and quickly: **Domino, Exchange, and SMTP**. Today thanks to **GCSReadMail**, you can listen to and answer your e-mails from your fixed or mobile phone.

Listen to your written messages!

Simply dial the GCSReadMail phone number of your company.

After identification, GCSReadMail enumerates your mailbox, the number of unread messages, the sender's name, the date and time, the subject.

By pressing a key on your phone, you can then read the content of the message, answer it, transfer the message by fax to the number of your choice or pass to the following message.

With GCSReadMail, you do not need your pc to consult your mailbox.

Reach our demonstration mailbox :

Just dial the following number : + 33.4.78.56.93.32, and

Follow voice prompts.

Architecture

Simple voice card installed in a centralized communication server and connected to the phone network.

Option: voice synthesis is available in several languages (English, French, Spanish, German, and Italian).

The AVM Informatique solution includes :

GCSReadMail connector

TTS module licences

Voice board

Functionalities

A Web Intranet page allows each user to personalize its confidential access to GCSReadMail :

- Three private phone caller id numbers give access directly to the user mailbox (business, mobile, home) ;
- A login and a password let you reach the firm messaging from all phones ;
- Criteria of filter :
 - Number of messages not read
 - Mail sender address
 - Priority of the messages

Complements

Complementary modules:

FaxServer32 enable you to transfer by fax the mail received.

SMSServer32 automatically inform you by SMS of the arrival of a new message.
